This letter confirms that the Center for Advanced Product Evaluation (CAPE) conducted tests for Sutphen Corporation on May 14, 2009. In these tests, the seat and seat belt anchorages of a Sutphen 2007 fire apparatus cab were evaluated to the requirements of FMVSS 207 section 4.2a and FMVSS 210 section 4.2. The first test included ABTS seats in the driver and officer seating positions. The second test featured a jump seat with a body mounted type 2 seat belt alongside an ABTS SCBA seat.

This letter also reports that the seat and seat belt anchorages in this Sutphen 2007 fire apparatus cab met the requirements of FMVSS 207 section 4.2a and FMVSS 210 section 4.2 in the driver, first officer and rear positions as tested.

Sincerely,

James R. Chinni P.E.  
Director of CAPE
