SALES TECHNICAL BULLETIN

ISX MOTORS & DRIVE SHAFTS

OVERVIEW

Due to the higher horse power and torque ratings of the 2013 ISX motors, all apparatus going forward will need to be configured with the larger 1810 drive shafts.

Until this can be captured in the bid system, please make sure that you select the 1810 drive shaft option in SQS for any apparatus you are currently working on with ISX motors. Any units that have already been sold with a 2013 ISX motor will be upgraded automatically at no additional cost to the dealer or customer.

If you have already proposed apparatus with a 2013 ISX motor and 1710 shafts, we will honor the 1710 price for the 1810 upgrade. Just please make sure to capture this on any new jobs going forward.

If you have any questions regarding this Technical Bulletin, please contact your appropriate Sales Application Engineer.
