HALE SHIELD SERIES SPEEDLAY PUMP MODULE

OVERVIEW

Hale is now offering a new side mount pump module configuration for use on the Shield Series product line. This new configuration utilizes the new Hale Qmax XS pump which is narrower than a standard Qmax pump. This module has (2) 1.5" speedlays (2" valves/plumbing) stacked one on top of the other with lift-out poly trays. Above the (2) speedlays there will be (1) 2.5" crosslay hose bed (2.5" valve/plumbing/swivel).

This new configuration has been loaded into your latest SQS Update (#36). To build this pump module, please follow these steps:

1. Replace the pump with option #60089950 – PUMP, HALE QMAX XS 1500GPM. The current price in the SUT company is \$8,355.36.
2. Replace the crosslays with option #72890003 – SPEEDLAYS (2) 2" W/1.5" SWIVEL & POLY LIFT-OUT TRAYS. The price for this speedlay option is built into the above pump option.
3. Add option #72890015 – 2.5" SINGLE CROSSLAY. The current price in the SUT company is \$3,112.66.

**All three of these options must be selected to properly configure this pump module. If you have a customer that does not want the top 2.5" crosslay, you MUST contact your Sales Application Engineer and get approval from Sales and Engineering before proposing ONLY (2) speedlays.

UPDATE (10/15/2013) – Hale has recently reduced the price of the speedlay module. Until this pricing can be reflected in the configurator, please deduct \$4,801.25 from the above options.

On the following pages you will find 3D images of this new pump module. If you have any questions, please contact your Sales Application Engineer.
