AKRON BRASS ELECTRIC VALVE CONTROLLERS

OVERVIEW

Akron Brass has begun to phase out the #9313 and #9315 electric valve controllers for their new designs (#9323 and #9325). The #9313 controller is no longer available. Any trucks in production that were sold with this controller will get the #9325 controller. The #9315 Navigator (pressure and flow) controller that is used for the aerial waterways and other applications is being phased out. You will start to see the #9325 take its place during this transition.

Below shows a comparison of how the controllers look. Not only is the controller itself different, the actuator on top of the valve body is also different.

9313/9315

9323/9325
