

SUTPHEN CORPORATION SALES TECHNICAL BULLETIN

ENGINE ENCLOSURE COVERINGS

OVERVIEW

Going forward, Sutphen Corporation has decided to change to Urethane coated engine covers as our standard. We feel that the Urethane coating offers more durability, increased sound deadening and insulation, a longer life, and is less expensive to produce than the vinyl engine covers.

The Urethane coating is offered in gray or black. We are currently using the Raptor Skin product, but are exploring other alternatives in our quest to consistently improve our products.

This will not affect current proposals or orders that have already been submitted to the Sutphen Sales Department.

On the follow page you will find photos of the current gray and black Raptor Skin coating offerings.

If you have any questions, please contact your appropriate Sales Application Engineer.
