

SUTPHEN CORPORATION SALES TECHNICAL BULLETIN

SEAT BELT LOCATIONS

OVERVIEW

You may have noticed a recent change in the seat belt locations for custom chassis and how they pull over the shoulder for the crew seat positions. We have changed to make the pull location match that of a standard automobile. All seating locations (as standard) will pull over the **OUTBOARD** shoulder, unless otherwise specified. This has been a running change over the past couple of months. In the case of a forward-facing crew seat that is in the center, purchasing/production will use their discretion.

If you have any questions, please contact your assigned Sales Application Engineer.
