

CUSTOM CHASSIS DASH REDESIGN

OVERVIEW

In an effort to create a more cohesive look inside our custom chassis, Sutphen will be implementing a new dash design into production. A molded housing, coated with the same urethane finish as the lower command console and engine enclosure, will replace the vinyl covered housing. The urethane coating will provide a more durable finish that is also easier to repair than the vinyl.

The urethane coating on this dash housing will match the lower command console and engine enclosure, unless otherwise requested.

You will begin to see these used on production units over the next couple of months. If you have any questions, please contact your SAE. Below are some images of the assembly.
