

OVERVIEW

Recently, we have added many new warning light options to the Configurator (SQS2), especially light bars. Due to all of the offerings, it can be a bit overwhelming selecting a light bar that meets your customer's desires and needs.

The following pages provide a brief overview of each brand's light bar offerings we currently have in the system. The last bullet point line under each light bar provides the equivalent model(s) in the other brands.

If you aren't already aware, you can view a configuration image for each light bars in the system. Once you select a light bar from the drop-down menu, you can click on the ? symbol beside the drop-down menu. It will bring up the light bar layout image in the right hand portion of the Configurator window:

Please note that not all of the light bar configurations will accommodate an internal opticom/emitter. The Configurator is programmed with rules that will allow (or disallow) internal or external opticom options depending on the brand and model of light bar selected. The opticom is now a required question to ensure you get the correct configuration.

If you have any questions, please contact your STM.

LIGHT BAR OFFERINGS

Whelen – Justice

- Available in 62" only (as well as mini bars)
- Low-profile bar with single row of LED modules (2.25" high)
- 62" standard NFPA configuration includes (10) LED modules
