

BOSTROM ELECTRIC SEAT UPDATE

OVERVIEW

Bostrom is proud to announce a new design for the Sierra EX8 Electric driver and officer's seat controls. Featuring a more modern look, the new switch offers the user a single touch point for recline, height, and fore/aft adjustments. The Sierra EX8 will maintain the same fit and function as you have today, requiring no modifications from the original specification. This update has been released by Bostrom for production on all Sierra EX8 seats as of September 20, 2017. Sutphen is pleased to announce that the first of these new controls were implemented on HS-6001. Service parts for the previous design will still be available.

If you have any questions, please contact your Sales Territory Manager, and we can also put you in touch with our OEM rep if you would like to discuss these changes in greater detail.

**Current Switch with
multiple touch points**

**NEW Switch with
single touch point**
