

## A/C TO FACE OPTION

### OVERVIEW

With the recent update to the configurator. The Sales Department would like to clarify the 28090100 A/C TO FACE option that was added to SQS2. This option replaces, and attaches to the existing forward facing A/C vents location. The ductwork is routed forward on top of the engine hood towards the driver and officer positions. The vents will be fully adjustable directed towards the face of the driver and officer. Please reference the images below for layout, and routing.

The Sales Department hopes this adds a little more clarity to this option. If you have any other questions please feel free to contact your Sales Territory Manager.
