There were numerous reasons for the change from Beede Gauges to Ametek Gauges. The main reason was the unwillingness from Beede to supply us with metric gauges to help make our products consistent. Sutphen did not want to offer different sets of gauges for our domestic and international products. There was also issues with supply, and shortages at times from Beede. To not let these issue hinder production Sutphen decided to make the change.

The first noticeable change is a larger bezel on the new Ametek Gauges. The other update is there will no longer be a red up or down push button on the dash. The mode button is now located on the speedometer gauge. We have also added a larger left and right turn signal indicator below the large set of gauges. The last noticeable change was to add a larger headlight indicator light in the middle of the dash. The next page will help show these subtle differences between the two sets of gauges.

The Sales Department hopes this adds a little more clarity to this option. If you have any other questions please feel free to contact your Sales Territory Manager.
