

STB-0099 – FRC GOVERNOR PRODUCT CHANGE PUMPBOSSE MAX

OVERVIEW

Sutphen has been notified that Fire Research Corporation (FRC) will be discontinuing all current product models of the PumpBoss product series effective December 31, 2024.

Products affected include:

- PBA200, PBA201
- PBA300, PBA301
- PBA400, PBA401

All affected PBA models are being replaced by the new PumpBoss Max (PBA500) series. According to FRC, the PumpBoss Max provides more features, updated hardware, and enhanced programming.

The PumpBoss Max (PBA500) is currently available and provides the same controls and safety features as the PumpBoss (PBA200 / 300 / 400). Additionally, the PumpBoss Max features a large, impact resistant (3.5") LCD screen, high tactile buttons, and enhanced programming. All current engine programming and options available with the PumpBoss (PBA200 / 300 / 400) are available with the PumpBoss Max (PBA500).

The PumpBoss Max has (2) 12pin harness connectors. It is not pin-to-pin (backward) compatible with the PumpBoss (PBA 200 / 300 / 400). All retrofit applications will require rewiring. PumpBoss Max (PBA500) dimensions are 3.65" x 7.42".

Options for the PumpBoss Max have been added to SQS2 as replacements for the previous PumpBoss options for all quotes going forward. All options for the current PumpBoss have been turned off the quote side of SQS2, but will remain active on the order side for the time being.
