

## STB-0101 – Wet Side Tanker Raptor Coating

### OVERVIEW

In an effort to add additional wear protection, Sutphen has made minor, but impactful, adjustments to its wet side tankers.

Effective from this point forward, you can expect to see the top edge of the wet side tank covered with color coated raptor for additional wear protection. The color coated raptor will be applied to the top edge of the tank and approximately two inches down the face of the outer wall.

The raptor will be a color match to the paint. While most will not notice this slight change, dealers and customers should be aware of the improvement. You can see an example of this update below:

In addition to the top edge of the wet side tank, the area behind the side mounted porta tank racks on the wet side tank will be finished with color coated raptor.

## STB-0101 – Wet Side Tanker Raptor Coating (Cont....)

### OVERVIEW

This additional coating will help protect the tank from scratching. This raptor coating will replace the clear vinyl protective section that has previously been applied. You can see a picture of the update below:

If you have questions or concerns, please reach out to your STM.
